Master of your domain!

Web Services

Upgrade your image!

Web Development – *Create Your Website*
The web is quickly becoming an essential in today's marketplace. So, if you're planning to stay in business, it's time for a website! Before you panic and start speed-dialing your accountant, realize that a website doesn't have to cripple your financial statement. It's not like in horse-racing – you don't need to come out of the gate with the most impressive looking entry. But you should have a horse in the race! Latest Developments can start you off slowly. Then, as your company grows, we can help you create a site to really grab people's attention. Take a look at our Website Development brochure for more details.

Web Hosting – *A Place to Put Your Site*
Once your site has been created, the other piece of the puzzle that you'll need is a web host. That's what allows you to put your website up on the internet. Can't wait to launch your shiny new site? We can get you set up. We can also help if you already have a site and aren't so happy with your current host. Just let us know what you need.

Domain & Email Setup – *Protect Your Name*
Not **quite** ready to commit to your own website? Okay, but **at the very least**, every company needs to own their own domain name. *What exactly is a domain name??? And why should you own one???*   A domain name is essentially a website address, for example *www.yourcompany.com*.

Why would you possibly need a domain name if your company doesn't have a website yet? Think of it as a virtual parking spot! If you lived in a busy downtown neighbourhood, you'd have to reserve a parking spot before you actually bought a car. This is the same thing. Owning your domain name reserves the web address that you'll want to use when you actually do set up your website. (And believe us, pretty soon you're going to need to!)

The other big advantage is that it allows you to create customized email accounts for everyone in your company, your.name@yourcompany.com. Whether you're trying to establish a more corporate image or just trying to project a bit more credibility, a professional appearance is key. Let's face it, for business use, hotmail accounts just don't cut it anymore!

The first step is always the most difficult one to take – so contact us today and let us help get you started! It's easy, it's affordable and it's critical – both for your company's current image – and its future growth!
